

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is actually a tool made out of high quality materials designed to endure the most difficult operations and work environments. This piece of equipment can enable the one driving to be able to operate the forks hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the arms or the entire load so as to facilitate more exact carrying and position in a faster and more effective manner.

The only one of its kind fork pocket design can enable the individual operating it to be able to safely sway the unit's forks without any worry of damaging the positioning cylinders. This could allow the worker the alternative to either perform simultaneous or independent fork movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on existing units.
